INTERNATIONAL SEARCH REPORT

International Application No. PCT/US 99 /03966

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

Claims Nos.: 1-13

Claim 1 on which claims 1-12 are dependent is directed to an antibody based (Ab) fusion protein comprising an Ig-portion linked to a non-Ig protein portion and having a longer circulating half-life than the said non-Ig protein portion when unlinked.

It appears that this claimed subject-matter has no support in the description. No Ab fusion protein has been compared therein to its corresponding non-Ig protein portion as to their respective circulating half-lives (the only comparisons reported [see page 13, lines 1-3, and page 16, lines 8-9] concern modified Ab fusion proteins and their corresponding unmodified Ab fusion proteins).

Such a lack of support renders the subject-matter of claims 1-13 inconsistent with the content of the description.

The said inconsistent is such that carrying out a meaningful search with regard to the said claims has not been possible.

It is to be noted that even if the subject-matter of claims 1-13 would have been consistent with the content of the description, a meaningful search could not have been carried out as in the documents of the state of the art relating to Ab fusion proteins comprising an Ig-portion linked to a non-Ig protein portion (see the documents cited in the present report) the respective circulating half-lifes of both the Ab fusion protein and the non-Ig protein portion thereof measured in the same experimental conditions are not indicated, a circumstance which renders any comparison impossible.
